FINAL QA AUDIT REPORT

Cynbit Website Quality Audit

Prepared By	Harsh Gupta	**Report Date**	29 October 2026
Website	https://www.cynbit.in/	**Source**	Testcases.xlsx and supplied screenshots
Environment	Windows 11 · Chrome 156.0.8078.49 · Laptop	**Status**	Pending review

1. Executive Summary

The Cynbit Website Quality Audit reviewed **120 test cases** from the supplied execution sheet. Recorded statuses are 104 PASS, 8 FAIL, 7 PARTIAL, and 1 NOT RUN. The results identify areas requiring follow-up, including navigation, product links, inquiry-form feedback, responsive layouts, and accessibility validation.

The report summarizes the supplied test evidence. Failed results have not been independently reproduced, and partial results require clarification before final disposition.

2. Test Execution Statistics

Status	Count	% of total
PASS	104	86.67%
FAIL	8	6.67%
PARTIAL	7	5.83%
NOT RUN	1	0.83%
TOTAL	**120**	**100.00%**

Pass rate among PASS/FAIL cases: 104/112 = 92.86%. This excludes PARTIAL and NOT RUN.

Status coverage: 119/120 cases (99.17%) have a status other than NOT RUN; this does not mean every case was fully verified.

3. Testing Scope

The test suite covers UI and visual rendering, navigation and interactive elements, forms and validation, responsive layouts, accessibility, Chrome rendering, and content/page behavior. Scope is limited to scenarios recorded in the supplied workbook.

4. Summary of Reported Failures

The following test cases were marked FAIL in the source workbook. Treat these as reported findings until reproduced and confirmed against the requirements.

Test Case	Reported Finding	Source Priority	Follow-up
CYN-UI-010	**Mobile navigation opens and closes** No menu-bar close option available.	High	Reproduce mobile menu open/close behavior.
CYN-UI-024	**Product links navigate correctly** Product links are reported as unavailable.	High	Check intended destinations and link behavior.
CYN-UI-057	**Inquiry failure is communicated** No error or processing feedback after submission, despite stable internet.	High	Test successful and failed submissions and user feedback.
CYN-UI-089	**Desktop layout at 1920px** Blank space at top and inconsistent main heading.	Medium	Reproduce at 1920px and capture evidence.
CYN-UI-090	**Desktop layout at 1366px** Blank space at top and inconsistent main heading.	High	Reproduce at 1366px and inspect alignment/overflow.
CYN-UI-091	**Tablet layout at 768px** Blank space at top and inconsistent main heading.	High	Reproduce at 768px and verify responsive reflow.
CYN-UI-092	**Mobile layout at 390px** Text overlap reported.	High	Identify overlapping elements and capture evidence.
CYN-UI-093	**Small mobile layout at 320px** Empty space on right side reported.	High	Check page width, overflow, and clipping.

Priority values are taken from the source workbook. Confirm severity after reproducing each finding and evaluating its user impact.

5. Partial Results Requiring Triage

Test Case	Recorded Observation	Recommended Triage
CYN-UI-059	**Email link opens the correct recipient** No actual result recorded.	Check the mailto target and test with an email client.
CYN-UI-061	**FAQ items expand and collapse** SECTION NOT AVAILABLE	Confirm whether FAQ content is in scope; otherwise document justified N/A.
CYN-UI-069	**Team page CTAs work** REDIRECTS TO THE CONTACT PAGE	Confirm whether redirecting to Contact is the intended CTA destination.
CYN-UI-077	**Pagination works correctly** NO SUCH FEATURE IS PRESENT	Confirm whether pagination is required for this blog listing.
CYN-UI-081	**Newsletter privacy link works** SAME PRIVACY POLICY PAGE OPENS FOR EACH LINK	Compare each privacy link destination with the intended requirement.
CYN-UI-094	**Landscape mobile layout remains usable** HOME AND SERVICE PANEL COVERS MOST OF THE SCREEN REST UI ON THE SCREEN NOT VISIBLE	Reproduce in landscape and assess whether important content is hidden.
CYN-UI-095	**No unintended horizontal overflow** NO UNINTENDED OVERFLOW	The recorded result says no unintended overflow; verify evidence and consider updating status if appropriate.

6. Test Environment

Parameter	Recorded Value
Operating System	Windows 11
Browser	Google Chrome 156.0.8078.49
Device	Laptop
Website	https://www.cynbit.in/

Viewport sizes referenced in the reported failures include 1920px, 1366px, 768px, 390px, and 320px.

7. Accessibility and Quality Considerations

CYN-UI-104 (text contrast) is marked NOT RUN in the source sheet. The audit therefore does not conclude that all tested text meets WCAG contrast expectations. Complete this check with contrast measurements and retain evidence for programmatic accessibility checks such as image alt text, form labels, validation errors, heading hierarchy, and reduced-motion behavior.

8. Recommendations and Action Plan

Order	Action	Evidence / Completion
High	Reproduce the eight reported failures and capture screenshots or recordings.	Confirmed defect record with URL, viewport, steps, expected and actual results.
High	Prioritize inquiry feedback, product links, mobile navigation, and responsive findings.	Impact-based severity and priority confirmed.
High	Complete CYN-UI-104 text contrast testing.	Contrast ratios and tested color combinations recorded.
Medium	Resolve all seven PARTIAL cases against requirements.	Each case receives a justified final status.
Before sign-off	Retest fixes and run relevant regression tests.	Retest evidence and review approval recorded.

9. Exit Criteria and Final QA Disposition

Before sign-off, reproduce and disposition the eight FAIL cases, resolve the seven PARTIAL cases, complete the one NOT RUN accessibility test, and retest confirmed fixes with relevant regression checks. A high pass rate alone is not sufficient for release readiness.

Final QA Status: Pending review of recorded findings and completion of outstanding test activities.

10. Approval
