TEST EXECUTION REPORT

Cynbit Website Quality Audit

Project	Cynbit Website Quality Audit	**Document Type**	Test Execution Report (TER)
Testing Phase	System / Website Testing	**Source File**	Testcases.xlsx
Report Status	Draft — Pending Defect Validation	**Prepared By**	Harsh Gupta
Report Date	29 October 2026	**Review / Approval**	Pending review / approval

1. Executive Summary

The Cynbit Website Quality Audit was conducted to evaluate the website's user interface, functional behavior, responsive design, accessibility, and browser compatibility against the documented test cases.

A total of **120 test cases** were reviewed in the execution sheet. Of these, **104** were marked PASS, **8** were marked FAIL, **7** were marked PARTIAL, and **1** was marked NOT RUN.

The recorded results indicate that most test cases passed. However, the reported failures and partially completed tests require further investigation and validation before the website's overall quality and release readiness can be determined.

2. Test Execution Statistics

Metric	Count	Percentage
Total Test Cases	120	100.00%
Passed	104	86.67%
Failed	8	6.67%
Partial	7	5.83%
Not Run	1	0.83%

Key execution metrics

• **Execution coverage by status:** 119/120 test cases (99.17%) have a status other than NOT RUN.

• **Pass rate among PASS and FAIL cases:** 104/112 = 92.86%.

• **Reported failures:** 8 test cases.

• **Pending partial validation:** 7 test cases.

• **Outstanding execution:** 1 test case.

Calculation note: The pass rate excludes PARTIAL and NOT RUN cases. Status coverage does not necessarily mean every test was fully executed or independently verified.

3. Testing Scope

The test execution sheet covers website quality checks across the following areas:

• User interface and visual rendering

• Navigation and interactive elements

• Forms and validation behavior

• Responsive design and viewport compatibility

• Accessibility

• Browser compatibility

• Content and page-level behavior

Only the areas and scenarios represented in the supplied test cases are included in this report.

4. Summary of Reported Failures

The following issues were recorded in the test execution sheet and require defect confirmation.

Reference	Reported Issue	Recommended Next Action
CYN-UI-010	Mobile navigation has no visible close option	Reproduce and verify navigation behavior
CYN-UI-024	Product links are unavailable	Verify link targets and intended navigation
CYN-UI-057	Inquiry failure is not communicated to the user	Test failed submission and error feedback
CYN-UI-089	Desktop layout at 1920px has excess top space and inconsistent heading	Inspect layout and heading alignment
CYN-UI-090	Desktop layout at 1366px has excess top space and inconsistent heading	Reproduce at the specified viewport
CYN-UI-091	Tablet layout at 768px has excess top space and inconsistent heading	Verify responsive layout
CYN-UI-092	Text overlaps at 390px mobile viewport	Reproduce and capture evidence
CYN-UI-093	Empty space appears on the right at 320px viewport	Check horizontal overflow and layout behavior

These are reported failures, not independently confirmed defects. Each should be reproduced, supported by evidence, and evaluated against the intended requirements.

5. Partial Test Results

Seven test cases were marked PARTIAL. These require further investigation, clarification of expected behavior, or completion of the relevant checks.

Partial results should not automatically be counted as failed defects. Each case should be resolved as PASS, FAIL, N/A, or another appropriate status according to the evidence and testing scope.

6. Test Environment

The test environment details shown in the supplied report screenshots are:

• Operating System: Windows 11

• Browser: Google Chrome Version 156.0.8078.49

• Device: Laptop

• Website URL: https://www.cynbit.in/

Record viewport dimensions, test data, and any additional environment details for each reproducible defect where applicable.

7. Defect Management and Retesting

For every confirmed defect, the QA team should record:

• Unique defect ID and related test case ID

• Clear defect title and description

• Preconditions and reproduction steps

• Expected and actual results

• Severity and priority

• Screenshot or screen recording

• Assigned owner and defect status

• Fix version and retest result

After a fix is deployed, the affected test case should be executed again. Relevant regression tests should also be performed to verify that the fix has not introduced new issues.

8. Exit Criteria and Release Readiness

The following actions are recommended before final QA sign-off:

• Reproduce and validate all eight reported failures.

• Complete and classify the seven partial test cases.

• Execute the remaining unrun test case.

• Attach evidence for confirmed defects.

• Assign severity and priority based on actual impact.

• Retest corrected defects and perform relevant regression testing.

• Review outstanding risks and obtain the appropriate approval.

A high pass rate alone does not establish release readiness. Final sign-off should depend on defect severity, completion of required testing, acceptance criteria, and stakeholder approval.

9. Conclusion

The Cynbit Website Quality Audit execution sheet records 120 test cases, with 104 marked PASS, 8 marked FAIL, 7 marked PARTIAL, and 1 marked NOT RUN.

The results provide an initial view of website quality and identify areas requiring further review. Final conclusions should be made only after the reported failures are validated, partial tests are resolved, and outstanding testing is completed.

Final QA Status: Pending defect validation and completion of outstanding test activities.
